PROFESSIONAL SUMMARY

DevOps Engineer with ~1 year of hands-on practice and 10+ years of systems development and technical operations experience spanning Indian Army aviation technician and algorithmic trading. Designed and built 3 production-grade DevOps projects. Proven track record of automating tasks with reliability. Seeking full time DevOps role.

TECHNICAL SKILLS

Cloud: Amazon Web Services, (EKS, EC2, VPCs, S3, EBS, ECR, IAM, Secrets Manager, Lambda).

Tools/Technologies: Docker, Helm charts, Kubernetes, Git, GitHub Actions, ArgoCD, Terraform, Ansible, MySQL, Linux.

Scripting/Programming: Shell Scripting (Bash), YAML, Python, JavaScript, SQL.

Monitoring, Observability & Logging: Prometheus, Grafana, Loki.

Networking and Server: TCP/IP, UDP, DNS, VPC, NACL, NAT, Route Tables, Load Balancing, Apache, Nginx.

Engineering Capabilities: GitOps, Containerization, Kubernetes Administration, CI/CD Pipeline Development, Secrets Management, Monitoring and Observability, Logging, Infrastructure as Code (IaC), Server & Configuration Management, Linux & Networking Administration, Scripting, Root Cause Analysis (RCA), Troubleshooting, Reverse Engineering.

PROJECTS

Productionizing a 5-Microservices Application ([GitHub Link](#))

- Engineered multi-env Helm charts, layered deployment, Lua-based health checks, IAM roles and health exporters; Implemented PersistentVolume for PostgreSQL and AWS DynamoDB, ensuring 0 data loss during cluster recreation.
- Reduced attack surface by externalizing all credentials via External Secrets Operator, AWS Secrets Manager and IMDSv2 and lowered image size by 17% (AL2023-minimal) while maintaining full glibc and dnf compatibility.
- Established monitoring, observability, and logging with Prometheus, Grafana, and Loki, enabling early alerting and reducing root cause analysis time by ~20%.

Terraform-based EKS Provisioning and GitOps-Driven CI/CD pipeline ([GitHub Link](#))

- Decomposed a single-pass Terraform deployment into 4 provisioning stages to create an EKS cluster (VPC → EKS → Addons → ArgoCD), reducing provisioning complexity and troubleshooting scope by ~75%.
- Eliminated manual container build and release processes by implementing an automated CI workflow (trigger → build → tag → publish), removing human error and accelerating deployment by ~20%.
- Architected branch-based CI and app-of-apps-based CD, reducing unwanted CI triggers by ~50%.

Production-Grade Log Management and Cleanup Automation ([GitHub Link](#))

- Built advanced log lifecycle framework for Linux, with features including custom path cleanup, script locking, dry-run, idempotent behavior and many more, mitigating disk exhaustion risks by ~50%.
- Configured active alerts for disk, inode and low-yield cleanup (less than 100 MB) with Slack and email.

EXPERIENCE

Self Employed

Badarpur Border, Delhi

Algo Trader

Aug 2021 - Jul 2025

- Designed 10+ event-driven algos and JavaScript ETL (ingest → filter → detect → alert) preprocessor pipeline.
- Reduced manual execution and analysis time by ~80%, through automation and workflow design.

Indian Army

Pan India

Aviation Technician

Jun 2014 - Jul 2021

- Identified critical maintenance gaps and developed a VBA-based lifecycle alerting system, cutting missed maintenance risk by ~98%, proved mission-critical during the **Pulwama attack**, saving 10+ daily manual hours.
- Independently diagnosed and restored 10 grounded headless Display Mission Computers (DMCs), increasing aircraft availability by 50% and recovering assets valued at ₹15Cr+; Automated 40% of MCC workflows.

EDUCATION

Linux Administration, Indian Army (Distinction)

Aug 2018 - Sep 2018

BCA, Christ College Rajkot (3 semesters)

Jul 2012 - Dec 2013
