PROFESSIONAL SUMMARY

8+ years of systems development and technical operations experience spanning Indian Army aviation technician, algorithmic trading, and dedicated DevOps practice since 2025. Specialized in Kubernetes, Terraform, CI/CD, and AWS. Designed and built 3 production-grade DevOps projects through hands-on practice. Proven track record of end-to-end infrastructure ownership, eliminating deployment bottlenecks, and automating tasks with reliability.

TECHNICAL SKILLS

Cloud: Amazon Web Services, EKS, EC2, VPCs, S3, EBS, ECR, IAM, ACL, Secrets Manager, Lambda.

Tools: Docker, Helm charts, Kubernetes, Git, GitHub Actions, ArgoCD, Terraform, Ansible, MySQL, Linux.

Programming/Scripting: Python, Bash, JavaScript, SQL.

Monitoring and Observability: Prometheus, Grafana, Alertmanager, Loki.

Engineering Capabilities: GitOps, Containerization, Kubernetes Administration, CI/CD Pipeline Development, Secrets Management, Monitoring and Observability, Infrastructure as Code (IaC), Configuration Management, Linux and Networking Administration, Scripting, Root Cause Analysis (RCA), Troubleshooting, Reverse Engineering.

PROJECTS

Productionizing a Microservices Application (GitHub) Mar 2026 - Present

- Engineered multi-environment Helm charts, layer-based deployment, Lua-based health checks, least-privilege IAM roles and health exporters, establishing end-to-end platform ownership; Implemented PersistentVolume architecture for PostgreSQL and integrated AWS DynamoDB, ensuring 0 data loss during cluster recreation.
- Reduced attack surface by externalizing all credentials via External Secrets Operator, AWS Secrets Manager and IMDSv2 and lowered image size by 17%(AL2023-minimal) while maintaining full glibc and dnf compatibility.
- Established monitoring, observability, and logging with Prometheus, Grafana, and Loki, enabling early alerting and reducing root cause analysis time by ~20%.

Reverse-engineered Terraform and built GitOps-Driven CI/CD pipeline (GitHub) Feb 2026 - Mar 2026

- Decomposed a single-pass Terraform deployment into 4 provisioning stages to create an EKS cluster (VPC → EKS → Addons → ArgoCD), reducing provisioning complexity and troubleshooting scope by ~75%.
- Eliminated manual container build and release processes by implementing an automated CI workflow (trigger → build → tag → publish), removing human error and accelerating deployment by ~20%.
- Architected branch-based CI and app-of-apps-based CD, reducing unwanted CI triggers by ~50%.

Production-Grade Log Management and Cleanup Automation (GitHub) Jan 2026 - Feb 2026

- Built production-style log lifecycle framework for Linux, with features including custom path cleanup, script locking, dry-run, idempotent behavior and many more, mitigating disk exhaustion risks by ~50%.
- Configured active alerts for disk, inode and low-yield cleanup (less than 100 MB) with Slack and email.

EXPERIENCE

DevOps Engineer | Self-Directed Engineering Practice Aug 2025 - Present

- Delivered 3 production-level DevOps projects across AWS EKS, Terraform, CI/CD, Kubernetes, and Linux within 3 months — owning end-to-end pipeline development, architectural decisions, and infrastructure design.

Algo Trading (Self Employed) Aug 2021 - Jul 2025

- Designed 10+ event-driven algos (ingest → filter → detect → alert) and JavaScript ETL preprocessor pipeline.
- Reduced manual execution and analysis time by ~80%, through automation and workflow design.

Indian Army (Aviation Technician) Jun 2014 - Jul 2021

- Identified critical maintenance gaps and developed a VBA-based lifecycle alerting system, cutting missed maintenance risk by ~98%, proved mission-critical during the **Pulwama attack**, saving 10+ daily manual hours.
- Independently diagnosed and restored 10 grounded headless Display Mission Computers (DMCs), increasing aircraft availability by 50% and recovering assets valued at ₹15Cr+; Automated 40% of MCC workflows.

EDUCATION

Linux Administration, Indian Army (Distinction) Aug 2018 - Sep 2018

BCA, Christ College Rajkot (3 semesters) Jul 2012 - Dec 2013
